## Complaint

The Department of Housing Preservation and Development (HPD) records complaints that are made by the public through the 311 Citizen Services Center, Code Enforcement Borough Offices or the internet for conditions which violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Each complaint is associated with one or more problems reported by the complainant. Problems are closed if a tenant verifies by phone that the condition was corrected or an inspection result is entered by an HPD inspector. A complaint is closed when all associated problems are closed.

The initial file will contain all complaints received since March 4, 2013. The information is updated monthly. Each new file will contain the information about complaints that were opened or closed during the month covered by the file. A complaint will be added to the file based on the date a complaint was received.

Complaints are identified by a ComplaintID. A complaint may be opened in one month and closed in another. In that case there will be an entry identified by the ComplaintID in the first month showing that the Complaint was opened and an entry with a matching ComplaintID in the second month showing that the Complaint was closed. If a complaint is opened and closed in the same month, there will be one record for that complaint, showing its creation date as well as its closed status.

Several changes were implemented starting with the file available on October 1, 2013. First, the StatusDate field was added to the Problem element. Second, Complaints are now included if the status of any problem associated with the complaint changes. Third, to facilitate tracking of the lifecycle of complaints with all their problems, the October 1 file contains not only complaints whose status, or the status of any of its problems, changed in September, 2013, but also all complaints that were open as of September 30, 2013.

Note that the inclusion of complaints if any of its problems' status has changed has the effect of increasing the size of the files, since more complaints will have status changes in any particular time period.

Additional changes were implemented starting with the file available on August 1, 2014. First, the UnitType field was added to the Problem element as a LookupValue. Second, the format of the pipe-delimited files was changed to include the numeric value assigned to LookupValue elements. For more details, see the description of the pipe-delimited files at the end of this document.

## Data Dictionary

The Complaint information is provided in two formats: XML and pipe-delimited values text.

## XML File Format

The XML file is named Complaintsyyyyymmdd.xml, where the date indicates the last day of the month covered by the file. Schema files defining the XML format are included in the zip package containing this file. The root schema file is called “services.hpd.gov.xsd”. The XML structure is pretty simple, containing the following major elements

### ComplaintOpenData

- Description – a brief description of the data set
- InformationURL – an url where related information can be found
- SourceAgency – the agency providing the data (HPD)
- SourceSystem – the agency’s system for managing the data
- StartDate – the first day of the month covered by the file
- EndDate – the last day of the month covered by the file
- Complaints
  - Complaint (one or more)
  - <multiple elements; see below>

The ComplaintOpenData element is the root element and contains some descriptive elements as well as the Complaints collection, which contains Complaint elements. Each Complaint element contains elements about the complaint, including a Problems collection containing Problem elements.

### ProblemStatus LookupValue Element

Element Name	Data Type	Description
GroupName	String	“ProblemStatus”
SeqNo	Long	Status code (1 = Open, 2 = Close)
ShortName	String	“Open”, “Close”
LongName	String	“Open”, “Close”
Order	Int	Not applicable

### Pipe-Delimited Values File Format

The pipe-delimited values text files are named Complaintyyyymmdd.txt and Problemyyyymmdd.txt, where the date indicates the last day of the month covered by the file. The pipe-delimited values text file contains as columns the elements of the Complaint and Problem elements listed above. The only difference in the column contents is that for elements defined as LookupValues, only the numeric value (starting with the August 1, 2014 release) and the long name appear in the file. The first record in each file has the column headers. For elements defined as LookupValues there will be two columns. The first contains the numeric value (SeqNo in the XML file); its column header is the element name concatenated with “ID”. The second contains the long name; its column header is the element name. Note that the ComplaintOpenData element does NOT appear in the pipe-delimited values text file.

Since pipe-delimited files do not handle parent-child relations efficiently, the Problem elements, which appear integrated with their parent Complaint elements in the XML file, are separated out into a separate file. To link a Problem in the Problems text file to its parent Complaint in the Complaints text file, use the ComplaintID column, which corresponds to the ComplaintID column in the parent Complaint in the Complaints text file.
